

## ***X1 Named Best of VMworld 2015 Award Finalist in the Desktop Virtualization and End-User Computing Category***

PASADENA, Calif. –(September 16, 2015)—[X1](#), a leading enterprise search software company supporting enterprises across on-premise, virtual, and cloud environments, announced today it's been named a "[Best of VMworld 2015](#)" Awards Finalist in the Desktop Virtualization and End-User Computing Category. The award was presented Tuesday, September 1, 2015 at [VMworld 2015](#).

A panel of judges comprised of recognized experts and editors chosen by TechTarget's SearchServerVirtualization.com, awarded X1 the honor. They evaluated 153 nominated products on display at VMworld 2015, and based the winners on innovation, value, performance, reliability, and ease of use.

According to Jack Madden, analyst and blogger on enterprise mobility and end-user computing, in a [live video interview](#), "You know what else I like about [X1 Search Mobile] is it can ...take the place of other enterprise file synch and share products, because that is all your files in the background, and not to mention all your inbox (emails and attachments) and they're right there, mobile enabled, with a policy around them. There is a lot there."

Recently released, X1 Search™ Mobile brings X1's award-winning user interface for desktop search to the mobile device, providing lightning-fast and secure search of email and files while on the go. No longer will users need to settle for the limited, slow and inconsistent "Exchange-only" searches of current smartphones. X1 Search Mobile enables full email (including archived emails) and desktop search from the mobile device, keeping workers productive no matter where they are.

"X1 is committed to providing enterprise IT and end-users with the fastest, easiest-to-use, cloud-enabled enterprise search software from any device," said John Patzakis, President and CEO of X1. "This important award validates our belief, and the belief of our many customers that X1 Search with X1 Mobile provides game-changing productivity in this new era of enterprise virtualization and mobility." Patzakis, continues, "It is an honor to be named Best of VMworld 2015 amongst a strong line-up of companies in such an important category."

This is X1's third major award of 2015 and the second in the important category of end-user computing. Earlier this year X1 was recognized as a "Cool Vendor" in [Gartner's Cool Vendors in Endpoint Computing 2015 report](#), and named by PCMag as [Editor's Choice for Best Desktop Search](#).
