

## Transforming eDiscovery & Enterprise Search of Data in the Cloud

### ***X1 Discovery Announces New Cloud-Deployable Capabilities for X1 Rapid Discovery Version 4, eDiscovery & Search in the Cloud or Anywhere in the Enterprise***

PASADENA, Calif. --(April 17, 2012)-- X1 Discovery, Inc., announces a major product release for X1 Rapid Discovery™ – a proven, and now truly cloud-deployable – eDiscovery and enterprise search solution enabling quick identification, search, and collection of distributed data wherever it resides in the cloud or within the enterprise. With X1 Rapid Discovery's significantly improved eDiscovery capabilities, corporations, law firms and consultants can now quickly access, search, triage and collect their data in their existing cloud environments, without having to first export that data; thereby transforming how they address the challenges of search, collection and analysis of cloud-based data. While other eDiscovery products require migrating or even shipping your data to the vendor tools, [X1 Rapid Discovery](#) is a hardware-independent software solution that uniquely installs and operates on demand where your data currently resides.

Cloud eDiscovery and search is a growing challenge for organizations. According to a recent PwC report, the cloud infrastructure will account for 30% of IT expenditures by 2014 but eDiscovery and search of cloud based data has proven to be very complicated, expensive and time-consuming --until now. "With X1 Rapid Discovery, we offer the first eDiscovery and enterprise search solution that is deployable in the cloud, right next to the data, or anywhere else within the enterprise," said John Patzakis, President and CEO of [X1 Discovery](#), "this is advanced technology unlike any other in the market today." Patzakis adds, "our development team of [eDiscovery industry veterans](#) and [Idealab](#) technologists strive to deliver disruptive eDiscovery technology and we are eager to bring this powerful eDiscovery solution to market, after many months of intensive development on this version 4."

X1 Rapid Discovery provides these revolutionary capabilities due to its distinctive ability to install remotely, in a matter of minutes, without costly and rigid hardware requirements. Other eDiscovery tools that are hardware appliance based, or require days or even weeks of on-premise manual installation and configuration, do not by definition truly support the cloud. X1 Rapid Discovery's easy to use web interface, federated search capabilities, matter centric work-flow, and high speed culling of up to terabytes of data, transform how legal and IT professionals conduct eDiscovery and enterprise search in the cloud and throughout the enterprise.

X1 Rapid Discovery is available for sale on April 17, 2012.
