

X1 DISCOVERY RELEASES VERSION 3.0 OF X1 SOCIAL DISCOVERY™

*Leading Investigative Technology for Social Media Content,
Now Addresses Data from YouTube, Web Capture, Web Crawl & Webmail*

PASADENA, Calif. --(November 14, 2012)-- [X1 Discovery, Inc.](#), the leading provider of social media discovery software, today announced the release of version 3.0 of [X1 Social Discovery](#), the investigative solution designed exclusively for the capture and analysis of social media content, now provides eDiscovery and computer forensics professionals the ability to collect data from websites, YouTube videos, and webmail, all within the same investigative work-flow as their social media content.

Major highlights of X1 Social Discovery's version 3 are its ability to ingest and index data from a wide variety of sources, such as Facebook, Twitter, LinkedIn, YouTube, website collection and scheduled crawling from websites, and webmail like Gmail, Yahoo and AOL. X1 Social Discovery continues to support best practices through read-only collection, creation of MD5 hash values and preserves metadata for all items collected. X1 Social Discovery provides an intuitive search and ECA interface which allows for the instantaneous searching of up to millions of social media and web items using our patented and award winning "fast as you type" search.

"X1 Discovery is committed to providing the most advanced computer investigative technology, to aid law enforcement, law firms, consultants, corporations and government entities with the burgeoning mounds of potential evidence available from social media networks and websites," stated Brent Botta, Vice President of Development & Product Management, at X1 Discovery. Botta continues, "we pride ourselves in having produced the first and only effective solution for social media investigations and eDiscovery, and now added YouTube video capture, webmail and web capture capabilities, without compromising the lightning fast speed, defensibility and scalability our customers depend on."

Enhancements to X1 Social Discovery include the following:

Web Capture & Web Crawl

X1 Social Discovery has the ability to conduct single-page web capture and multiple-page web crawl, while adding this data to the overall collection so that it can be searched and reviewed alongside the rest of the social media content.

YouTube Video Download

X1 Social Discovery can also capture entire YouTube videos and the metadata associated with the video.

Webmail Connector – IMAP

X1 Social Discovery's webmail connector indexes any email box which uses IMAP configuration, with pre-set collection options for Gmail, Yahoo and AOL.

MapIt Geolocation & Geo-fencing

View a map that displays geolocation data with the location, name and status update of the Facebook or Twitter user. Geo-fence searching allows the examiner to create a perimeter for a real-world geographic area and filter any items indexed with Geo-Data that fall within that area.

X1 Social Discovery is now available for sale through the X1 Discovery website at an introductory price of \$945 per seat annually. Certified training is available through the [National White Collar Crime Center](#).
