

# X1 Social Discovery

## Social Media and Internet-Based Data Collection

**X1 Social Discovery™ is the industry-leading solution for law enforcement, law firms or legal consultants who need to collect and search data from social networks and the internet.**

### Unique in the Industry

X1 Social Discovery aggregates comprehensive social media content and internet-based data into a single user interface. Other competitive solutions are narrowly focused upon a single social network – often having a separate application for each – and have no ability to aggregate all collected data into a single interface. X1 Social Discovery allows all collected data to be analyzed in one place and supports filtering across both metadata and content from social networks, websites and webmail.

X1 Social Discovery is designed to address social media content from the leading social media networking sites, websites and email including:

- Web pages & websites
- Facebook
- Twitter
- Instagram
- YouTube
- Tumblr
- Gmail
- YahooMail
- Outlook.com
- AOL Mail
- Internet Message Access Protocol (IMAP)

Also unique in the industry, X1 Social Discovery collects social media metadata in a legally defensible manner, preserves the chain of custody, and has the ability to collect up to dozens of metadata fields directly from supported social networks. X1 Social Discovery uses the same court-accepted digital hashing algorithm used by digital forensics and eDiscovery professionals to validate and authenticate their data.

### About X1

X1 creates exceptional solutions for people and organizations that need to find information, whether on individual desktops, company networks or social media at the fastest speeds in the industry. Powered by patented and award winning technology, X1 supports more than 600 enterprise customers and more than 600,000 active commercial and government users.

### Key Advantages

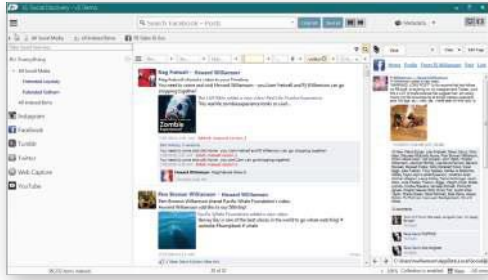

- Collect from multiple social media platforms and web sources
- Organize collections with a case-centric workflow
- Preserve more comprehensive metadata unique to each item captured
- Easily collect and review data within a single interface
- X1's patented "Fast-As-You-Type" technology
- Export to multiple formats including load files for Relativity/RelativityOne
- X1 patented web page authentication

***"X1 Social Discovery – a desktop software for Windows that every litigator should include in their technical belt. A single license of X1 Social Discovery is affordable and necessary for the smallest domestic issue all the way up to the largest civil litigation matter."***

### Our Customers

Instantly preview content from individual items ingested, including any referenced link

## Collection

Data can be collected and indexed directly from top social media platforms, websites, and webmail providers. X1 Social Discovery aggregates data from these multiple sources in real time, in a highly scalable and case-centric manner.

## Authentication

Digital hash values of individual items are calculated upon capture and maintained through export. Automated logging and reports are generated. Key metadata unique to social media and web streams are captured through deep integration with various social media platforms.

Search against metadata fields and content of referenced links and view highlighted matches instantly while filtering results

## Search

Perform broad, unified searches of collected data across multiple accounts, social media streams and websites from a single interface. Linked content is automatically indexed and searched and the results are aggregated for sorting, tagging and export consistent with standard eDiscovery or investigative workflow.

Conduct single-page web capture and multiple-page web crawl and review the data alongside the rest of the social media content

## Export

Export data along with metadata and linked content to a wide variety of deliverable formats including Concordance, CSV, PDF, PST, and HTML. Create eDiscovery load files and deliver collected data in a searchable native format to a review platform like Relativity.

Capture YouTube video content and the metadata associated with a video, playlist or channel
