

## X1 Enterprise Collect

Remotely search data across the enterprise – only collect what you need

Last year \$13.1bn was spent on eDiscovery, with \$2bn of that spent on preservation and collection alone - and those costs are projected to double over the next 5 years!\*

The major contributor to this alarming trend is that corporate data volumes are exploding and over 80% of that data is unstructured or distributed on hard-to-access data sources. Today, most organizations are stuck in a collect-everything approach which fails to take advantage of legal eDiscovery guidelines around proportionality or relevance. This ultimately results in an inefficient, time-consuming and costly discovery process. If there is a better, faster, and more defensible way to do it, why would you pay for the over-collection and processing of data you don't need?

Would you like to...

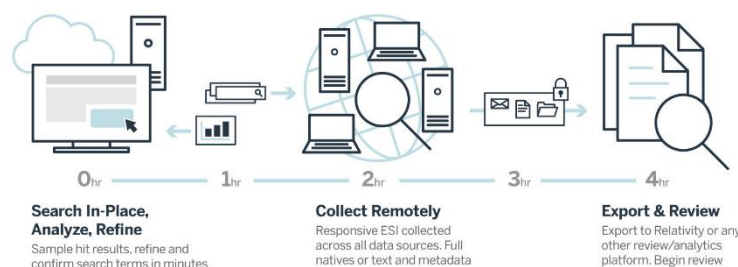

- Stop the over-collection of irrelevant or unresponsive data?
- Gain early insight into your case strategy with immediate pre-collection visibility into custodial data?
- Search globally across thousands of endpoints simultaneously, all from a central location?
- Employ a defensible, targeted, and iterative search process prior to collection to achieve proportionality?
- Streamline your eDiscovery process down to a matter of hours or days instead of weeks and months?
- Significantly reduce your eDiscovery costs by avoiding processing costs and unnecessary review fees?

If so, that's exactly why our team of legal eDiscovery experts created *X1 Enterprise Collect*<sup>™</sup> - The industry's first and only remote, index in-place, search and collection technology for corporate eDiscovery and compliance. Read on to learn how *X1 Enterprise Collect* can operationalize your eDiscovery and ensure that you only collect what you need!

### Technology to the Rescue

With *X1 Enterprise Collect*, perform targeted data collections anywhere across the enterprise, anywhere in the world. With our proprietary and patented technology, all the data is indexed in its host location so that it can be rapidly accessed, searched, and analyzed to ensure you stop unnecessary over-collection and only collect what you need. Whether it's globally distributed laptops or large file-shares with TBs of data, *X1 Enterprise Collect's* proprietary technology revolutionizes the eDiscovery workflow by offering unique capabilities and cutting-edge features:

- Proprietary index data in-place technology
- Patented,<sup>1</sup> fast-as-you-type keyword and Boolean search
- Remote search and collection from a central location
- Collect from any laptop, anywhere in the world whether on-network or off
- Early Data Assessment to gain visibility into potentially relevant data before collection
- Rapidly index and analyze TBs of data in-place on any Network File Share (NFS) or data lake
- Secure collection stored in the native file preservation format
- Seamless integration with Relativity or direct export to the review platform of your choice

# X1 Enterprise Collect

## Key Benefits

### Reduce eDiscovery Collection Costs by up to 90%

Avoid over-collection and eliminate unnecessary data processing, storage, and review costs by precisely knowing responsive data volumes and keyword statistics prior to initiating collection...and only collect what you need.

### Search and Identify Responsive Data Immediately at the Endpoint

X1's lightning fast and patented search technology enables you to iteratively conduct in-place data assessment across thousands of devices and data sources simultaneously.

### Lightning-Fast Collection Enables Increased Speed to Review

Rapid and remote collection of relevant case data measured in minutes and hours instead of days and weeks; with seamless, one-click integration into Relativity or export into the review platform of your choice.

### Improved Case Strategy and Defensibility

Rapid Early Case Assessment (ECA) unlocked by gaining visibility into responsive search terms and analytics before collection, enables improved case strategy and a repeatable, documented and defensible process.

### Global Scalability of your eDiscovery Process

Whether implemented onsite or hosted in the cloud, enables centralized and secure search and collection across all of your global data sources to include laptops, desktops, file shares, mail stores and cloud repositories.

## Operationalize your Modern eDiscovery Process with X1

Modern eDiscovery workflows require targeted collection methods to effectively streamline the process. Traditional eDiscovery methods are inherently slow and antiquated as they rely on over-broad collection techniques (e.g., full-disk imaging), and lengthy, siloed processing stages that result in large volumes of unnecessary data and significantly drive up eDiscovery costs.

X1 Enterprise Collect enables users to truly operationalize a modern eDiscovery workflow. With X1, you can bypass the expensive, traditional methods and employ a faster, defensible, and more efficient process that exponentially reduces costs, and dramatically compresses time to resolution.

X1's eDiscovery solutions are offered fully-hosted in the cloud, hosted in your own environment, or our team of legal and technology experts can help do it for or with you.
