Today's Discussion

- Deploy open-source or proprietary AI models directly to distributed data sources

- Perform real-time, in-place analysis across emails, files, and chats

- Eliminate the risk, latency, and cost of large-scale data movement

- Accelerate legal, compliance, and security workflows with AI-driven insights

- Demonstration and Q&A

X1

Industry Perspective – Fortune 100 CISO

- "Normally AI for infosec and compliance use cases is a non-starter for security reasons, but your workflow and architecture is completely different."

- "This allows us – all behind our firewall -- to develop our own models that are trained on our own data and customized to our specific security and compliance use cases and deployment in-place across our enterprise."

X1

X1

The Leader in Index-In-Place Data Discovery & AI Enablement

X1 is the pioneer of distributed micro-indexing software and is the only solution capable of truly finding, analyzing, and acting on data in-place across the enterprise at a massive scale impossible with other offerings – enabling corporations and government agencies to dramatically reduce costs and risk and tackle large-scale eDiscovery & GRC use-cases.

Enterprise Endpoints.

Cloud data sources.

Network file shares.

All analyzed in-place on the X1 Platform.

EU GDPR COMPLIANT

ISO 27001 Information Security Management Certified

Capterra ★★★★☆

The Competitive Advantage of X1's Micro-Indexing Architecture

Enterprise Systems
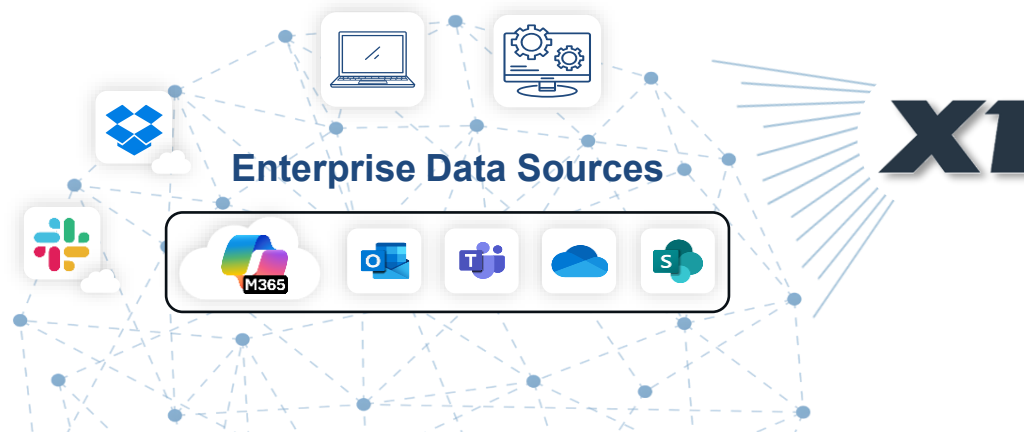

Bulk Copy and Transfer

Other Data Discovery or GRC Platforms

Industry Wide Data Migration and Analysis Challenges

Proprietary architecture to identify, analyze, and act on data in-place—enabling enterprise-wide advanced AI capabilities

Enterprise Data Sources

X1

X1's Unique Solution

X1 Securely Brings AI to the Data Rather than Moving Data to the AI

Deploy 3rd Party Models Into X1 In-Place Micro-indexes

Run the AI Models to Enrich the X1 Index with AI Applied Tags

Query & Act on AI Enriched X1 Index Against Millions of Tags with Intelligent Metadata and Document Content/Text

X1 Addresses Critical Data Discovery & Management Pain Points Through Its Comprehensive Micro-Indexing Solution

Organizations are facing significant challenges when managing their ever-increasing information sprawl. X1 enables them to rapidly and compliantly identify, analyze, and act on data in-place to substantially reduce costs, mitigate risk, and accelerate operational efficiency.

eDiscovery

- Early Case Assessment
- Data Identification
- Data Collection

Risk & Compliance

- PCI / PII / Privacy Remediation
- Departed Employees
- GDPR & FOIA

X1

InfoSec

- Investigations
- Data Breach & Incident Response
- IP Leakage / Insider Threats

Governance

- Data Separation / ROT
- M&A
- Data Mapping

X1 Enterprise - The Industry's Best Solution for M365 Data Discovery

Unified search and collection of on-premise and cloud data sources

Targeted search and analytics at the point of collection

Scalable and automated: No premium (E5) or supplemental services need

Significant throughput: Hundreds of custodians per day vs. 2-3 with MS Purview

More Thorough Data Collection
- Archived email, inactive mailbox support
- Hyperlinked M365 files collected in-line
- Targeted and in-context Teams chats, and more...

Key Points and Considerations

- X1 **will not** collect, access or monetize your data
- This is **not a brand-new solution** but an added feature to X1 Enterprise
- **Other vendors won't follow suit soon**. They are locked into highly centralized architectures
- **No price increase or added charges**, all you need is to purchase X1 Enterprise and some additional computing power (at cost) to run AI models at scale
- **Available for Proof-of-Concept Testing** in January 2026. Production deployments in April 2026

AI In-Place - Bringing the AI to the Data

X1

Industry Perspectives

X1

"Enabling AI in-place where our corporate client's data lives is game-changing. We look forward to working with our clients to deploy AI models that are either pre-trained or customized for a specific matter or compliance requirement utilizing the X1 Enterprise platform."

- **William Belt**, Managing Director and Consulting Practice Leader at **CDS**

"X1's new implementation is AI that serves the client, not data monetization. By attacking the cost driver—data movement—it can lower discovery spend, tighten compliance, and help companies leverage their information for internal value and tell their story more effectively in court. It's exactly the kind of vision that helps clients address their challenges while meeting their legal obligations."

- **Kelly Twigger**, CEO of **Minerva26**

Questions & Next Steps

We're happy to take your questions.

Next Steps

- Request a deeper technical walkthrough or demo

- Explore a Proof-of-Concept evaluation

- Discuss your Microsoft 365, eDiscovery, or compliance workflows

- Learn more about AI In-Place and distributed micro-indexing
