X1® to Offer X1 Search® at Discounted Rate to Help Meet COVID-19 Mandated Remote Work Requirements

X1 Making the Industry's Leading Desktop Productivity Technology More Accessible for Remote Workers Globally During Crisis

(LOS ANGELES, CA) - March 19, 2020 – X1®, the global leader in enterprise-class, distributed data discovery and compliance software, today announced the availability of its flagship X1 Search® desktop productivity application at a heavily discounted rate in an effort to help global remote workers improve their ability to work efficiently with little to no impact on virtual private network (VPN) or company network bandwidth. Available now through April 30, 2020, X1 is seeking to help knowledge workers adjust to a new reality of working remotely for the foreseeable future without placing additional load on already-stressed company budgets or corporate networks and IT departments.

Rated the Top Desktop Search Application by users on G2, X1 Search provides users the fastest, simplest way to find and work with the exact information they need, yet otherwise struggle to find. By providing the fastest access to documents and email, X1 Search unlocks the potential to dramatically improve productivity and allow employees to function at their highest level – no matter where they are.

"Businesses and organizations are trying to adjust to the new reality of a remote workforce that could last for some time to come," said Craig Carpenter, CEO of X1. "When we brainstormed about how we could help, it dawned on us that those workers without great desktop search will struggle to adjust to the 'new normal' of working remotely. Knowing our software can help in just such a situation, we want to make X1 Search even more accessible to anyone who needs to find the right information quickly to do their jobs remotely."

X1 Search's powerful, unique capabilities include the following:

- Massive productivity gains from being able to search email, attachments, calendars, contacts, SharePoint® and OneDrive® instantly, with "fast-as-you-type" results;
- Search results include data in cloud repositories like Box®, AWS® and OneDrive alongside email, files, and SharePoint content, reaping the benefits of a 'single-pane-of-glass' view for business content; and
- Little to no impact on corporate VPNs or company networks as the system is querying the local index on the user's laptop, desktop or workstation.

"In the current climate we are in, it has never been so important to have a reliable search software such as X1 that can seamlessly transition from office to remote work without losing any of its capabilities," said Elliot Sagor, Partner at Mintz & Gold LLP. "X1 has far exceeded any other software I have tried. Not only is the keyword search so unbelievably easy, but you can also set up and save customized searches in particular folders. I strongly recommend X1 for anyone who stores research and data they need to access - wherever they may be working."
